Imaging congenital heart disease in adults

This article provides an overview of the role of imaging in the assessment of adults with congenital heart disease (ACHD). Congenital malformations of the heart affect at least 1% of newborn infants [1]. Without intervention, the prognosis for more complex disease forms is poor. However, advances in paediatric cardiology and cardiac

Congenital heart disease (CHD) is one of the most common inborn defects. The success in treating CHD in children, even when they have complex cardiovascular defects, is resulting in a steady increase in the number of adults with CHD who need to be followed up clinically and by imaging owing to the potential for late sequelae. In providing expert, up-to-date guidance on selection of imaging
